

Full Contour Translucent Zirconia

Is now available at Precision Dental Arts, Inc.

Introducing Sirona inCoris TZI by Bruxzir

We are pleased to announce that we have expanded our material list to now offer Sirona inCoris TZI by Bruxzir, a full-contour translucent zirconia that is ideal for posterior crowns and bridges that require incredible strength and durability, while offering all-ceramic like esthetics.

STRONG AND DURABLE

Boasting over 900MPa of flexural strength, inCoris TZI is a monolithic full contour zirconia that allows for no porcelain overlay, making this restoration virtually chip proof and an ideal replacement for cast-gold restorations and metal occlusal PFMs.

COST EFFECTIVE

The cost of gold has reached record highs over the last year. At \$159 per unit, inCoris TZI offers a high strength, cost effective alternative to the high cost of dental alloys with no variable alloy cost.

ALL-CERAMIC LIKE ESTHETICS

inCoris TZI offers your patients a tooth colored material that rivals full-cast gold and metal occlusal PFMs in strength. While it may lack the enhanced esthetic characteristics that e.max or empress can offer, inCoris TZI is your esthetic solution for high strength posterior restorations.

NO OUTSOURCING

Like all of our all-ceramic options, we take pride in the fact that inCoris TZI restorations are completed from start to finish right here at our laboratory in Tigard, Oregon where inCoris TZI is precisely designed and milled on our Sirona inLab MCXL. We shade the pre-sintered zirconia to start developing the appropriate esthetics, and then sinter the Zirconia at 1530 degrees Celsius for 6 1/2 hours overnight. Once sintered, we seat the restoration on the model, make any adjustments necessary, and then enhance the esthetics with time tested and world class materials and techniques. Try inCoris TZI Today!

- * 4 day turn-around time
- * Ideal alternative for the high price of alloy based restorations. Gold trading at over \$1500/ounce!
- * Over 900 MPa of flexural strength
- * All-ceramic like characteristics
- * Your esthetic solution for high strength posterior restorations
